Software Engineering student at McMaster and RBC intern building AI workflow automation and secure cloud backend services with Java, Python, Spring Boot, and Azure.

Education

McMaster University - Bachelor of Software Engineering *Sep 2024 – Apr 2029 (Expected)*
Relevant Courses: Data Structures & Algorithms, Object-Oriented Programming, Software Development, Computer Architecture, Software Design, Discrete Mathematics, Machine Learning

Technical Skills

Programming: Java, Python, JavaScript, C, C#, HTML, CSS
Frameworks & Tools: Spring Boot, FastAPI, React.js, REST APIs, Maven, Docker, Git
Cloud & DevOps: Azure, Cosmos DB, MongoDB, GitHub Actions, CI/CD, SonarQube, Vercel, Linux
AI & Engineering: LLM APIs, Agentic AI, Data Pipelines, OOP, DSA, Agile, Unit Testing, Debugging

Experience

Software Developer Intern - RBC *Sep 2026 – Present*
- Implemented agentic AI and LLM workflow automation in Java, Python, and FastAPI to reduce manual effort
- Built secure Azure backend services with Spring Boot using encryption and key management practices
- Strengthened CI/CD pipelines by fixing build failures and adding security, unit, and functional tests
- Collaborated with cross-functional teams in an Agile environment to design, test, and deliver solutions

AI Web Application Developer - VJDS International Inc. *May 2026 – Jul 2026*
- Developed AI-powered applications using Python, React.js, and LLM APIs for workflow automation
- Designed automation pipelines for data processing and context handling to reduce manual effort
- Improved reliability through testing, debugging, and iterative evaluation of AI features

Conferences Operations Coordinator - Google Developer Group *Sep 2025 – Present*
- Coordinated hackathons and technical workshops in fast-paced team environments
- Managed event operations and participant communication for smooth execution and delivery
- Sourced 11 judges through LinkedIn outreach and professional networking for hackathon events

Projects

PRPilot - Code Review Automation System (Python, FastAPI, REST APIs) *Apr 2026 – May 2026*
- Built AI workflow automation system using FastAPI and GitHub webhooks for code review processes
- Designed LLM-based pipelines for pull request analysis and automated feedback generation
- Implemented CI/CD pipelines using GitHub Actions for testing and deployment automation
- Developed secure APIs and event-driven workflows supporting scalable automation systems

Catan Strategy Game (Java, Python, Design Patterns) *Jan 2026 – Mar 2026*
- Designed modular Java system using OOP principles and design patterns for scalable architecture
- Built algorithms and data structures for system state evaluation and decision-making logic
- Processed JSON datasets through structured software pipelines and validation workflows
- Performed testing and static code analysis using SonarQube for improved reliability

Chord Hero - Accessibility Focused Application (Python, Git) *Mar 2025 – Apr 2025*
- Led development of accessible application for visually impaired client with usability focus
- Coordinated development, testing, and iteration cycles for project delivery
- Conducted user testing and feedback analysis to improve accessibility and UX design
- Awarded 2nd Place at McMaster Engineering Showcase among 200+ projects

Certifications

JPMorganChase Software Engineering Job Simulation (Forage) *May 2026*
- Built backend components using Java, Spring Framework, REST APIs, SQL, and external API integrations
- Applied debugging, testing, and software engineering principles to build reliable backend systems

Tata - GenAI Data Analytics Job Simulation (Forage) *May 2026*
- Designed AI automation workflows using LLMs, prompt engineering, and responsible AI principles
- Analyzed data and evaluated results to identify trends, risks, and actionable insights
